

We Believe in Teamwork

So much so that we've designed a portfolio of solutions that can help your organization get more done by providing a platform for sharing information and working together in teams and communities. These solutions are designed to work with your existing infrastructure to give your users the tools to easily share assets across teams, departments, and organizations—while letting IT maintain control. With tools that enable integration, document sharing and borderless communication, end users can more easily harness the collective intelligence of the organization. Our collaboration solutions can help businesses achieve better knowledge sharing, streamline business processes and maximize resources through:

Application Development

Businesspeople like you can become inundated with mountains of data—on the Internet, in data systems, in documents, in e-mail, and on desktops. It can be difficult to make the right information available to the right people at the right time, so that people in your organization can make more informed decisions and take action. 3t Systems designs custom applications and performs strategic SharePoint integration, that provides your users access to the data they need in a structure aligned with your organizational objectives – all delivered through a user friendly interface.

Enterprise Content Management

Organizations can accumulate huge volumes of unstructured content, which can make it difficult for users to find what they need and to make the most out of their company's valuable content assets. With multiple users making changes to documents, it can also be a daunting task to ensure everyone sees one version of the truth. 3t Systems offers enterprise content management solutions (ECM) that can help your company overcome these challenges. Our solutions extend content management to every information worker in your organization through integration with familiar tools, while simultaneously safeguarding documents with incorporated rights management.

Unified Communications

3t Systems offers unified communications (UC) technologies that use the power of software to deliver streamlined communications—messaging, voice, and video—across applications and devices that your users work with every day. Integrating phone calls, voice mail, and conferencing with the work you do on a computer—documents, instant messaging, e-mail, and calendars—has the power to fundamentally change the way people work. With the rich presence capabilities, users can easily see their colleagues' availability and contact information and communicate with them using familiar business applications. Organizations of all shapes and sizes, from small local business through large call center operations, can leverage UC technologies to increase productivity and enhance communications.
