

Build & Grow Your Apps, Not Your Infrastructure

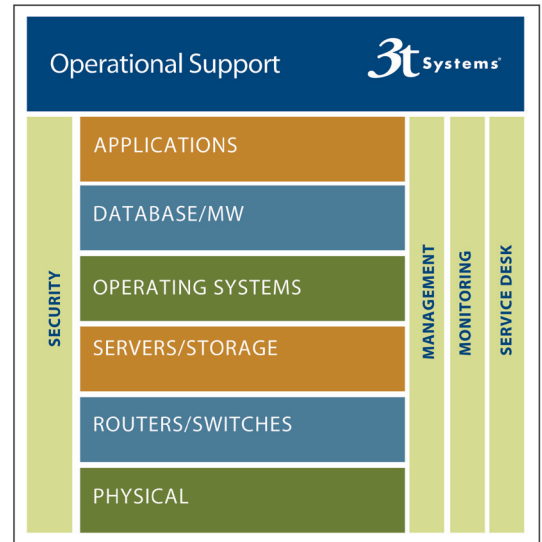

Your customers are demanding Software as a Service (SaaS), but deploying a SaaS environment in a fast and secure manner requires large capital expenditures and additional staff. What is the solution to develop and grow your applications and software, but not your infrastructure? By partnering with 3t Systems, you are guaranteed a secure and scalable enterprise class infrastructure without the expenditures, so you have the freedom to focus on growing your business.

How is 3t Different?

Most hosting companies are only able to focus on your servers and storage. At 3t Systems, we have you covered from the servers up through the desktop and applications.

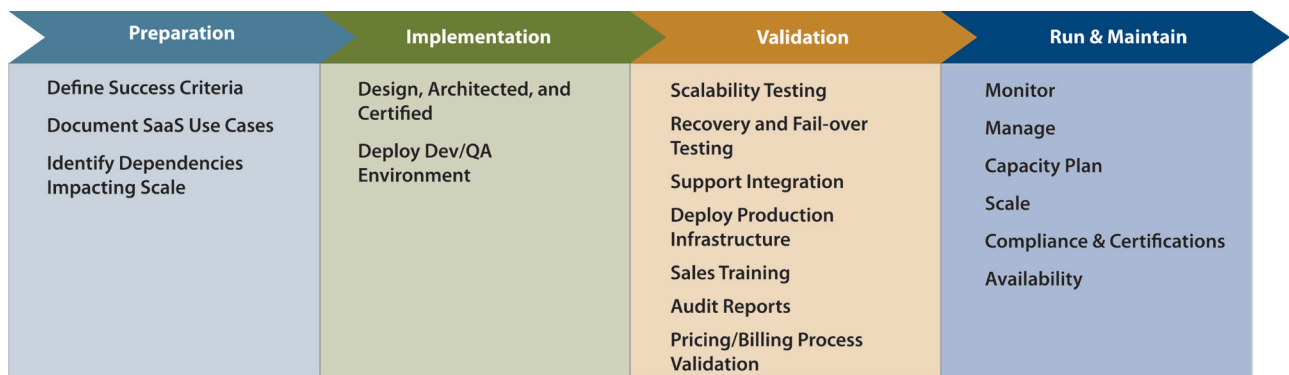

With 3t Systems, you are able to offer your clients a Total Hosted Solution giving them the freedom to focus on their top priority business needs. 3t Systems Total Hosted Solution covers the physical servers and applications, including support and security.

3t System's Total Hosted Solution gives your customers the opportunity to move to the cloud and focus on their business; not the daily firefighting.

Our Process

We have 4 simple steps to work with our partners to implement their SaaS solutions. A successful implementation requires a reliable infrastructure – from the network to the data center – and we can help you grow while remaining secure and agile.

Get Started Today!

Our SaaS solution and portfolio of managed services offerings can help you plan and execute technology initiatives, and focus on your core business by letting us handle the day-to-day tasks that detract from complex projects.
