

Senior Network Engineer

3t Systems is a co-sourcing managed services firm that helps organizations realize their full business potential. We give our clients the freedom to focus on their business by removing the pressures related managing and maintaining IT. Our team of accredited consultants and data center professionals has more than 300 combined years of field-deployment expertise in collaboration, managed services and virtualization technologies. It is this level of expertise that enables 3t to consistently deliver solutions that streamline communications, boost productivity and maximize investments.

We are currently seeking a Senior Networking Engineer. At 3t Systems a Senior Network Engineer is responsible for the installation, configuration, maintenance, and troubleshooting of our complex LAN/WAN environment. S/he works with the data center team to assist with the overall support, maintenance, and optimization of the data center. S/he works with the Client Manager to ensure that we create and exceptional customer experience for our clients.

Responsibilities:

- Deployment of MPLS VRFs as required to support client environment
- Document each client environment
- Act as a Tier 3 support specialist for client escalations
- Create and implement maintenance plans for network infrastructure
- Work in collaboration with the other data center team members to optimize and standardize the network
- Backup fellow data center team members in the maintenance and optimization of the data center
- Contribute technical expertise to project documentation
- Understand and implement the solutions designed by the Lead Architect
- Provide insight to the Lead Architects about the client environments
- Act as a technical mentor to other team members
- Demonstrate strong support and customer service orientation
- Perform Knowledge Transfer including training and documentation
- Support existing and new deployments
- Analyze and resolve issues related to the client environments from the application to at least the operating system level
- Look for opportunities to improve the client's productivity and efficiencies through technology
- Ask questions and seek to develop a deeper understanding of the client's business and how IT can be used to assist the achievement their business strategy and goals
- Document internal processes and procedures related to duties and responsibilities
- Provide support for the client environment after hours and on the weekends when needed
- Other responsibilities as assigned or required

Qualifications:

- Minimum 5-8 years of network support with 100 devices (routers and switches) or more
- Very good understanding of MPLS (VRF's)
- Current CCNP
- Strong understanding of routing protocols such as MP-BGP, EIGRP and OSPF
- Experience with Cisco 6509/7200/7300 series, ISR and ISR-G2, Catalyst 3750, Nexus 5k & 7k
- Worked with complex ASA configuration (IP-Sec/NAT/UCM Proxy/AnyConnect)
- Solid troubleshooting skills
- Knowledge of "best practices" in functional areas and ability to apply knowledge of the technology to add value to client implementations
- Ability to work independently
- Excellent verbal and written communication skills
- Comfort interfacing with clients on a regular basis
- Proven ability to achieve results and drive others to achieve results
- Sound judgment and personal integrity
- Experience with ConnectWise is a plus
